Client is a leading provider of next-gen pharmacy and advanced healthcare analytics solutions, with operations spread across the United States.

Client requirement:

Migration of legacy systems and a smooth transition post adoption of next-gen technologies along with feature enhancements, while ensuring the highest level of quality assurance. The plan was to achieve complete legacy hardware rebranding through an offshore facility.

Peritus role:

- Features enhancements (7 business and process-critical areas).
- Implemented Angular (technology) to re-build three next-gen solutions.
- Provided support and simplified the product update mechanism.
- Removed unused/redundant features/functionalities.
- Database translations and modifications.
- Ramped up the QA team that was equipped with knowledge of enhancements and automation tools.
- Value addition by acting as a consulting entity to the onsite QA and dev teams to provide ideas, input, and feedback - for new products and offerings.

Impact:

- Faster-than expected and successful market release of the high-tech products.
- Successful offshore support for 100% rebranding of legacy hardware.
